

PRESS RELEASE – for immediate release

Smart Approach launch the World's first web-based x-ray screener simulator

The world's first high fidelity x-ray screener simulator; capable of delivering high quality real bag images via the internet has been officially unveiled.

Managing Director, Mike Ormesher says, "this is an exciting time for Smart Approach. SmartSystem, our computer based x-ray screener and training package has long since been recognised as a global leader and I am delighted to be able to launch our web based version, SmartSystem V8.

SmartSystem V8 follows a long line of established and robust predecessors. This version enjoys all of the existing functionality but with improved features and of course complete flexibility. V8 customers can use their software whenever and wherever, all they need is a web browser and an internet connection.

Martin Miller, Sales & Marketing Director, continues "our customers have been telling us for a long time that they want their x-ray screener training software to be more flexible and want the option to access it over the internet. However, they have always been very clear that this cannot be at the expense of security and the quality of the product. We have worked long and hard to develop and test SmartSystem V8 so that it lives up to the rigorous demands of our customers.

Smart Approach is proud of its reputation as a long-standing provider of leading computer based (CBT) x-ray screener training and security training solutions.

Mike Ormesher comments "one area that sets us apart from our competitors is our use of high fidelity, real bag images. We make a huge ongoing investment in capturing images of real bags for all makes and models of x-ray machines. This means that during training a screener is actually seeing what they would if they were at a real machine in a live situation. This technology enables us to train x-ray baggage screeners to the highest standards".

“The new SmartSystem V8 will test and track screeners actions, producing an individual training record. It cleverly assists the HR function by tracking training activity and progress across a distributed organization”, adds Martin Miller.

For anyone wishing to see the new SmartSystem V8, visit www.smartapproach.com to organise a demonstration.
